INSTRUCTOR: Terry Kistler tlk123@email.com
DATE: October 20 through December 15
TEXT: HTML, XHTML, and XML
 - Carey ISBN 0-619-26801-8

Showing Up
Class Assignment (HW)
Test

This is a 8 week class. Do all activities associated with the reading. I only require 1 Case Problems per chapter but do as many Case Problems as you wish. Always review and know the answers to the QuickCheck Questions. You will need to devote at the minimum 3 hours of outside lab per week. There will be quizzes. The quiz is to be seen as a teaching tools to help us keep track of your progress. Please see me if you will be absent for a class.

	TO BE DONE BEFORE CLASS	THIS WEEKS HOMEWORK This only to be handed in	REVIEW IN CLASS

Week 8 15-Dec	Read 541 - 564	(HW) Do Tut. 10 extra credit - other case prob.	Review Objects - Events

* Hand in the homework as soon as you complete it. There is no penalty for not handing it in weekly but do not get behind. * This is a hard class to play catch-up. Commit yourself to stay on the program and reading assignments. I need to see only source code. * Don't worry if your web page graphics do not print completely.* The class time is to be devoted to HTML work not to surf in the net. Please print name, class, tutorial and case number on the top of your homework. Check the website <http://www.course.com> for additional information and help. My web site is www.terryl.com - Download case files to help you over a problem or to check your work before handing it in. Web Persons - Use only one email for class. Send finished assignments to me as an attachment to your email or just copy/paste in the source code. Put Tutorial # and Case # on the Subject of your emails please.

Student Learning Outcome for BUSW 535 – HTML II

For Academic Year 2008-2009 – 4/5/08

Student Learning Outcome

SKILLS: As a result of textbook or class exercises, students will be able to

1. Create and use forms to capture information from a Web page.
2. Use Java script to enhance Web pages.
3. Use sound, video and pictures on Web pages.
4. Identify societal and ethical issues about the Internet

KNOWLEDGE: As a result of standardized orientation information in every Microcomputer class, students will be able to

1. locate the Business Admin and Microcomputer degree and certificate requirements in the catalog (or on-line catalog) and determine what classes they need to take for one of the options.

VALUE: As a result of class discussions, students will be able to

1. explain the value of having microcomputer skills when seeking employment or promotions (i.e., meeting requirements listed in job applications; having an overview of how all applications interact which could improve a department's information exchange and productivity).

For these courses, the hourly “by arrangement” times provide students with opportunities to enrich their learning beyond class time through a number of activities such as one-on-one conferencing or tutoring with microcomputer instructors and the use of the computer labs during aide-assisted lab hours to do the following: expand their application program skills by doing textbook exercises not assigned in classes; to explore parts of the application programs not covered in the classes; and to access the Internet for research.
